PAKISTAN

WAVE REPORT
FII TRACKER SURVEY
Conducted September-October 2015

March 2016
The Financial Inclusion Insights (FII) program responds to the need identified by multiple stakeholders for timely, demand-side data and practical insights into digital financial services (DFS), including mobile money, and the potential for their expanded use among the poor.

The FII team conducts regular survey and qualitative research in Kenya, Tanzania, Uganda, Nigeria, India, Pakistan, Bangladesh and Indonesia to:

- **Track access to and demand** for financial services generally, and the uptake and use of DFS specifically;
- **Measure adoption and use** of DFS among key target groups (females, BOP, rural, unbanked, etc.);
- **Identify drivers and barriers** to further adoption of DFS;
- **Evaluate the agent experience** and the performance of mobile money agents; and
- **Produce actionable, forward-looking insights** to support product and service development and delivery, based on rigorous FII data.

The FII program is managed by InterMedia. Visit the FII Resource Center to learn more: [www.finclusion.org](http://www.finclusion.org).

Country context

As of June 2015, six banks and two microfinance banks were licensed to offer mobile financial services in Pakistan.

- Telenor Easypaisa remains the clear market leader.

By the end of the second quarter of 2015, a total of 99.5 million transactions, valued at PKR 505.9 billion ($4.8 billion USD), were conducted. This amounted to a 37 percent increase in transaction volume and a 43 percent increase in value over the previous quarter.

- Customer transactions amounted to 94.3 million in volume and PKR 308.4 billion (2.95 billion USD) in value.
- Over-the-counter (OTC) transactions represented 70 percent of customer transactions in both volume and value; m-wallet transactions amounted to approximately 30 percent each in volume and value.
- According to the State Bank of Pakistan, the rise in customer transactions can be attributed to the rise in cash deposits and withdrawals, fund transfers, G2P transactions and mobile top-ups.

According to the State Bank of Pakistan (SBP), there were 10.8 million registered mobile money accounts by the end of June 2015.

- Telenor Easypaisa accounted for 7.5 million of the registered accounts, followed by Omni with 1.8 million accounts, and Waseela Microfinance at 1.2 million accounts.
- Between the first and second quarters of 2015, mobile money registration increased by 44 percent.
- As of the end of June 2015, an estimated 47,902 biometric identification devices were installed at agent locations to facilitate real-time account opening. Thirty-six percent of agent locations across Pakistan had this capability as of June 2015.
- Between April and June 2015, Mobicash and Easypaisa opened 1.3 million customer accounts using the biometric verification system, according to SBP data.

Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+) September-October 2015.
Key findings: Financial inclusion

- Financial inclusion remained at under 10 percent of adults.
  - Financial inclusion increased from 7 to 9 percent between 2014 and 2015.
  - Most demographic groups saw no more than a 1 percent change in financial inclusion. Financial inclusion grew most for women, doubling from 3 percent in 2014 to 6 percent in 2015.

- Banks are still the major contributor to financial inclusion.
  - Registered bank accounts remained steady; 7 percent of adults have bank accounts.
  - Mobile money and NBFI accounts both grew from less than 1 percent of adults prior to 2015, to 1 percent of adults in 2015.

Financially included by demographic
(Shown: Percentage of Pakistani adults within each demographic group, by year)

Source: InterMedia Pakistan FII Tracker surveys Wave 2 (N=6,000, 15+) September-December 2014; Wave 3 (N=6,000, 15+), September-October 2015.
Key findings: Account access and ownership

- Access to financial accounts is driven by both mobile money and banks.
  - More adults (9 percent) use mobile money than use banks (8 percent). However, the majority of mobile money users are unregistered, using the service over the counter (OTC).
  - Eighty-six percent of mobile money users are using the services OTC through an agent rather than registering for their own accounts.

- Non-digital access is the preferred route to bank account access.
  - Nearly all bank account holders reported being able to access their accounts digitally, but the preferred way to access an account is OTC at a bank branch (82 percent).
  - The second choice was through ATMs, at 72 percent.

- Males are more than twice as likely as females to be active bank account holders.
  - Ten percent of males were active bank account holders, compared with 4 percent of females.
  - Urban/rural and above/below poverty line divides were 10 percent vs. 6 percent, and 9 percent vs. 5 percent, respectively.

Financial account access
(Shown: Percentage of Pakistani adults, by year)

Source: InterMedia Pakistan FII Tracker surveys Wave 1 (N=6,000, 15+), November 2013-January 2014; Wave 2 (N=6,000, 15+), September-December 2014; Wave 3 (N=6,000, 15+), September-October 2015.
Key findings: Mobile money

- Mobile money use, as a portion of awareness, remains steady at just over one in 10.
  - Seventy-two percent of Pakistanis were aware of at least one mobile money provider, 13 percent of whom had used mobile money at least once. This compares with 76 percent and 11 percent, respectively, in 2014.

- Regardless of which company someone has a SIM card with, Easypaisa is the mobile money deployment they are most likely to be able to identify.
  - The largest gap between customers’ awareness of their own mobile network operators’ mobile money products and that of Telenor’s Easypaisa is seen among Warid customers. Thirty-nine percent of Warid SIM-card holders could identify Warid’s Mobile Paisa product, but 86 percent could identify Easypaisa.
  - Outside of Telenor SIM card holders, Mobilink customers were most likely to be able to identify their company’s mobile money service. Sixty percent of Mobilink customers knew about Mobilink Mobicash.

- Use of mobile money for advanced activities is increasingly common.
  - In 2013, 42 percent of mobile money users only used the services for depositing and withdrawing cash. Now, that number has dropped to 4 percent.
  - Advanced use of mobile money services, such as bill pay and loans, has moved from 28 percent of mobile money users in 2013 to 42 percent in 2015.

Source: InterMedia Pakistan FII Tracker surveys Wave 1 (N=6,000, 15+), November 2013-January 2014; Wave 2 (N=6,000, 15+), September-December 2014; Wave 3 (N=6,000, 15+), September-October 2015.
Many Pakistanis who do not have bank accounts lack the necessary information to make informed decisions about bank account use.

- The top two reasons Pakistanis gave for not registering a bank account were they didn’t have enough money to do so or they didn’t engage in financial activities that an account could facilitate.
- Among those who thought they did not have enough money, 71 percent admitted they did not know how much it costs to open an account.
- Seventy-four percent of those who did not believe they could use a bank account for activities they engage in did not know that bank accounts could be used to make retail purchases. Forty-five percent did not know that banks could be used to access credit.

Low literacy and the inability to use a mobile phone remain significant barriers to adopting mobile-based financial services.

- Sixty-five percent of Pakistani adults are able to read and understand basic sentences in either Urdu or English.
- Seventy-six percent of adults can access a mobile phone, but just 40 percent had ever sent or received a text message. The technical skills necessary for using mobile money are similar to those needed to send and receive text messages.

### Key findings: Awareness, literacy and mobile competency

#### Reason for not opening a bank account
(Shown: Percentage of unbanked, n=5,518)

- **41%**
  - I don't have enough money to open an account

#### Estimate of cost of opening a bank account
(Shown: Percentage of those who believe they don’t have enough money to open an account, n=2,254)

- **19%** More than 1,000 PKR ($10 USD)
- **6%** Less than 1,000 PKR ($10 USD)
- **4%** Free
- **71%** Admit not knowing how much it costs to open a bank account.

Digital stored-value accounts: accounts in which a monetary value is represented in a digital electronic format and can be retrieved/transferred by the account owner remotely. For this particular study, DSVAs include a bank account or NBFI account with digital access (a card, online access or a mobile phone application) and a mobile money account.

Understanding financial inclusion

<table>
<thead>
<tr>
<th>What is financial inclusion?</th>
<th>How is it measured?</th>
</tr>
</thead>
<tbody>
<tr>
<td>FII’s definition of financial inclusion goes beyond “having accessed” a financial service. This comparatively conservative definition requires account ownership with an institution that provides a full-suite of financial services and comes under some form of government regulation.</td>
<td>To determine financial inclusion, we look at the percentage of adults who report having an account in their name with at least one institution offering a full-suite of financial services.</td>
</tr>
<tr>
<td>These services include savings, money transfers, insurance or investment. Institutions that only offer loans to consumers, such as some microfinance institutions (MFIs), are not considered to be full-service institutions. (Source: InterMedia FII Program)</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>What is included in this?</th>
<th>What isn’t included?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Banks, nonbank financial institutions and mobile money services are included in the financial inclusion measure. In the case of Pakistan, nonbank financial institutions include MFIs, committees, and post office banks. In all countries, individuals must have an account in their own name.</td>
<td>Excluded from the financial inclusion measure are money guards, savings collectors, hawla/hundi networks, and digital recharge cards that are not attached to a bank or MFI account.</td>
</tr>
<tr>
<td>Additionaly, individuals who have accessed formal financial services but do not have their own account, such as those using another family member’s account, are not included.</td>
<td></td>
</tr>
</tbody>
</table>

Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+), September-October 2015.
Just under one-tenth of Pakistanis are financially included

- 9% Financially included*
- 1% have a full-service NBFI account
- 7% have a full-service bank account**
- 1% have a mobile money account

Individuals must have accounts with institutions offering a full suite of financial services, including savings facilities. Some banks and many NBFIIs only offer credit services to their customers; these are not included.

*Overlap representing those who have multiple kinds of financial accounts is not shown.
**For the purposes of this study, bank account holders have accounts at full-service institutions, unless otherwise noted.

Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+), September-October 2015.
Incremental increases across mobile money and NBFIs grew financial inclusion overall; product adoption by women drove progress

Financially included
(Shown: Percentage of Pakistani adults)

Financially included by demographic
(Shown: Percentage of Pakistani adults within each demographic group, by year)

Overlap representing those who have multiple kinds of financial accounts is not shown.

Source: InterMedia Pakistan FII Tracker surveys Wave 2 (N=6,000, 15+), September-December 2014; Wave 3 (N=6,000, 15+), September-October 2015.
Financial inclusion corresponds to greater economic stability and financial planning across poverty levels

**2015: Economically vulnerable**
(Shown: Percent of Pakistani adults by financial inclusion, poverty levels)

- Financially included above poverty (n=355): 15%
- Financially excluded above poverty (n=2,571): 12%
- Financially included below poverty (n=202): 21%
- Financially excluded below poverty (n=2,872): 25%

**2015: Have a financial plan for unexpected events**
(Shown: Percent of adults by financial inclusion, poverty levels)

- Financially included above poverty (n=355): 62%
- Financially excluded above poverty (n=2,571): 57%
- Financially included below poverty (n=202): 54%
- Financially excluded below poverty (n=2,872): 51%

Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+), September-October 2015.
Few Pakistanis are digitally included; banks lead digital inclusion

8% Digitally included*

- 0.3% have a digital NBFI account
- 7% have a digital bank account
- 1% have a mobile money account

*Overlap representing those who have multiple kinds of financial accounts is not shown.

Digital access to an account means that an individual can access their account via any number of electronic platforms, including debit and credit cards, electronic money transfers, or mobile phones.

Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+), September-October 2015.

**Households affected by SIM-card verification initiative**
(Shown: Percentage of Pakistani adults, N=6,000)

- A household member discarded a SIM card due to the verification initiative

93% [7%]

The SIM-card verification initiative that was part of the new biometric registration requirement caused some disruption, with 7 percent of adults reporting their households were affected by it. However, it did not appear to reduce ownership or access to SIMs among either gender.

Source: InterMedia Pakistan FII Tracker surveys Wave 2 (N=6,000, 15+), September-December 2014; Wave 3 (N=6,000, 15+), September-October 2015.
Basic phones – those that only allow calling, SMS and saving phone numbers – are more common than smartphones or feature phones

**Basic phone**: Only allows calling, text messaging (SMS) and saving phone numbers

**Feature phone**: Has a camera, radio, etc., but does not have email or mobile applications

**Smartphone**: Provides access to email accounts, mobile applications

*Question allowed for multiple responses, depending on the number of phones owned.*

*Source: InterMedia Pakistan FII Tracker survey Wave 3 (N=6,000, 15+), September-October 2015.*
Telenor has the greatest market share among mobile phone owners, and its customers tend to have the highest rate of basic phone ownership.

METHODOLOGY & RESEARCH DESCRIPTION
FII Pakistan Tracker Survey details

Survey Summary

- Annual, nationally representative survey (N=6,000) of Pakistani adults aged 15+
- Face-to-face interviews lasting, on average, 44 minutes
- Third survey (wave 3) conducted from 9/03/2015 to 10/30/2015
- Tracks trends and market developments in DFS based on the information gathered in the first survey, conducted in 2013, and second survey conducted in 2014

Data Collection

- Basic demographics and poverty measurement (Grameen Progress Out of Poverty Index)
- Access/use of mobile devices
- Access/use of mobile money
- Access/use of formal financial services (e.g., bank accounts)
- Access/use of semi-formal and informal financial services (e.g., MFIs, cooperatives, village savings groups)
- Financial literacy and preparedness
- General financial behaviors
Sampling Frame

• A nationally representative sample of adults (defined as those aged 15 or above) was developed using 2011-12 national population projections based on 1998 Census Data.

• The total sample was distributed proportionally to the size of the population within urban and rural strata in each of Pakistan’s four provinces – excluding the federally administered tribal areas.

• The total population was further administratively divided into 5,000 census-defined urban circles and 48,000 rural mouzas.

Primary Sampling Units (PSUs)

• Within urban strata, census circles and within rural strata, mouzas were selected proportionally to their population size.

• Ten interviews were conducted in each selected urban circle and mouza primary sampling unit.

• For security reasons, PSUs were divided randomly between male and female interviewing teams.

Sampling Start-Points, Households and Respondents

• The census circles and villages to which sampling points were assigned were mapped into blocks and a block was randomly selected. The household within the selected block from which interviewing commenced was selected by generating a random number between one and 10, and skipping that number of households from the first household that interviewers encountered when entering the block.

• After completing an interview at the randomly selected first household, subsequent households were selected using the right-hand rule (every fifth household in urban areas and every third household in rural areas).

• One respondent from each household was selected using the Kish grid method, and relevant consent for eligible respondents under 18 years of age was obtained.
GLOSSARY
GLOSSARY

• **Access** – Access to a bank account or mobile money account means a respondent can use bank/mobile money services either via their own account or via an account of another person.

• **Active account holder** – An individual who has a registered financial account and has used it in the last 90 days.

• **Active user** – An individual who has used any financial account for any type of transaction in the past 90 days via his/her own account or somebody else’s account.

• **Adults with DFS access** – Adults who either own a DFS account or have access to someone else’s account.

• **Below the poverty line** – In this particular study, adults living on less than $2.50 per day, as classified by the Grameen PPI.

• **Credit-only financial institutions** – Financial institutions that only offer loan disbursement services to their customers.

• **Digital financial services (DFS)** – Financial services provided through an electronic platform (mobile phones, electronic cards, the internet, etc.). For this particular study, digital financial services include bank services and mobile money services.

• **Grameen Progress out of Poverty Index (PPI)** – A poverty measurement tool from the Grameen Foundation wherein a set of country-specific questions are used to compute the likelihood that a household is living below the poverty line.

• **Financially included** – Individuals who have registered for a financial service account with a full-service financial institution.

• **Full-service institutions** – A financial institution that offers customers at least one of the following services: savings, money transfers, insurance or investments.

• **Mobile money (MM)** – A service in which a mobile phone is used to access financial services.

• **Mobile-money value-added services** – Individually branded service products offered by mobile money providers in addition to or along with their basic mobile money services.

• **Registered active user** – A person with a registered DFS account that has used it in the last 90 days.

• **ROSCA/committee** – An informal rotating savings and credit association (ROSCA) whose members are a group of individuals who agree to meet for a defined time period to save and borrow together, a form of combined peer-to-peer banking and peer-to-peer lending.

• **Services beyond basic wallet** – DFS transactions that go beyond simple deposits, withdrawals or money transfers.

• **Urban/rural** – Urban and rural persons are defined according to their residence in urban or rural areas as prescribed by the national bureau of statistics.
