PUTTING THE USER FRONT AND CENTER

The Financial Inclusion Insights (FII) program responds to the need identified by multiple stakeholders for timely, demand-side data and practical insights into digital financial services (DFS), including mobile money, and the potential for their expanded use among the poor.

The FII team conducts regular survey and qualitative research in Kenya, Tanzania, Uganda, Nigeria, India, Pakistan, Bangladesh and Indonesia to:

• **Track access to and demand** for financial services generally, and the uptake and use of DFS specifically;
• **Measure adoption and use** of DFS among key target groups (females, BOP, rural, unbanked, etc.);
• **Identify drivers and barriers** to further adoption of DFS;
• **Evaluate the agent experience** and the performance of mobile money agents; and
• **Produce actionable, forward-looking insights** to support product and service development and delivery, based on rigorous FII data.

The FII program is managed by InterMedia. Visit the FII Resource Center to learn more: [www.finclusion.org](http://www.finclusion.org).

EXECUTIVE SUMMARY
Almost two-thirds of Kenyan adults are financially included

- Inclusion is driven primarily by mobile money services.
- Mobile money account holders have more than just a mobile money account.
  - 49% of mobile money account holders also have a bank account and 15% have a registered NBFI account.

65% of adult Kenyans are financially included

63% have registered mobile money accounts

26% have bank accounts

8% have nonbank financial institution accounts (excluding credit only)**

*Overlap representing those who have multiple kinds of financial accounts is not shown.
**There is anecdotal evidence that the use of nonbank financial institutions (NBFI) could be somewhat under-reported possibly out of fear of fraud or taxation.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Nearly two-thirds have digital access to their financial accounts

- Mobile money accounts remain the most common form of digital financial accounts.
- Most bank account holders also have digital access.
  - 89% can access their accounts digitally through an ATM card, mobile apps, or online.
  - 11% are likely customers of banks that use a traditional paper-log approach to documenting transactions.
- One in 10 have an account at a nonbanking financial institution, and most of them (76%) can access their accounts digitally.

*Overlap representing those who have multiple kinds of financial accounts is not shown.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
There’s a parody between account holders and active users, suggesting that once an account is opened, regular use follows.

### Bank and mobile-money (MM) account access and use: 2013 vs. 2014*

(Shown: Percentage of Kenyan adults who fall into each category, 2013 (W1) N=3,000, 2014 (W2) N=2,995)

KENYA

The population’s financial vulnerability is the key challenge to advancing the use of DFS and financial services in general

**CHALLENGES**

- **Extreme financial vulnerability of the population:** The majority of adults spend more than they earn and have debt exceeding their savings. Few are prepared to face an emergency.

- **High rate of remittance-reliance, including international remittances:** 45% of adults receive remittances (employed or unemployed). The percentage is higher among rural and poor. Among the employed, the majority of remittance-recipients are self-employed and farmers.

- **High level of migration, including emigration as a result of terrorist activity:** With the high level of insecurity and active population migration, many go back to using cash because it’s easy to access.

- **A shrinking agent network as dissatisfied agents exit the business:** Aside from agent absenteeism, low agent liquidity and poor GSM network continue to negatively affect MM user experiences.

**POSSIBLE ACTIONS**

- The combination of clear relevance and low cost are key to uptake and use of DFS.

- A remittance culture defines the financial landscape in Kenya. Offering more roaming-remittance services, including with Western countries, might attract more users to DFS.

- While migration patterns clearly interfere with the use of DFS and any other financial services, migrants usually remain connected to Kenya via a remittance corridor. Using such internal and external corridors to offer DFS products might help mitigate the overall negative effects of migration.

- DFS providers might have to re-evaluate their approach to training and supporting DFS agents to be able to take advantage of Safaricom opening its agent network to other financial service providers.
Kenyan market offers a multitude of opportunities to advance DFS and financial inclusion

**OPPORTUNITIES**

- **High level of preparedness for using digital financial services:** 74% own mobile phones and most can perform even advanced activities on a phone without help; most also have all documents required to open a financial account.

- **Kenyans are open to trying new VAS:** About two years after the launch, both M-PESA and Lipa na M-PESA's reach continue to expand at a fast pace.

- **Kenyans easily switch providers when they discover better and/or cheaper services:** In anticipation of a cheaper Equatel mobile money product, many joined Equity Bank.

- **The majority of bank and NBFI accounts come with digital access:** This adds a layer of cross-product competition (banks vs. mobile money vs. nonbank financial institutions) as opposed to just between-product competition.

- **High rates of P2P activities:** Remittance is the second most common way of dealing with money leftover after paying expenses. Remittance-sending behaviors do not differ by demographics. Even poor and rural adults send remittances regularly.

- **Historically vibrant culture of saving and borrowing:** Kenyans actively save and borrow through informal financial networks and semi-formal financial institutions.

**POSSIBLE ACTIONS**

- The Kenyan market is very welcoming for new and creative DFS offers. It allows for massive real-life testing of new product and service offers.

- Interoperability of DFS, including between telcos and banks can reinforce the market positions of both and allow to leverage market strength and seize market opportunities.

- P2P transfers have been for a long time, and will continue to be, the staple of Kenyans’ financial behaviors. Improving and advancing P2P offers will help to expand the audience of DFS users.

- Flexibility in savings, and, especially, borrowing, terms and conditions make informal financial networks more attractive than very restrictive DFS products (e.g. M-Shwari). Re-evaluating borrowing and savings terms might help tailor products to existing needs without increasing the risks associated with lending to the poor.
CHANGES TO THE KENYAN FINANCIAL INCLUSION ECOSYSTEM IN 2013-2014
Economic and political instability have hindered financial services use, despite active government involvement in promoting financial inclusion

- **Government encouragement:** President Kenyatta openly supported Equity Bank’s introduction of the Thin SIM Technology arguing that competition would deepen mobile money reach and benefit ordinary Kenyans.

- **End of agent monopoly:** The Communications Authority of Kenya (CAK) ordered Safaricom to share its M-PESA agent network with other financial organizations, including banks and telcos. M-PESA agents are now allowed to serve clients of any providers. This move is expected to expand agents’ reach and benefit underserved populations.

- **Declining number of mobile money agents:** The Central Bank of Kenya reports an unprecedented decline in the number of active mobile money agents. Just in the last three months of 2014, approximately 8,000 agents closed their agencies. According to the Microsave ANA survey of agents, Kenyan agents showed the lowest average profit and highest level of dissatisfaction compared with agents in other East African countries. In addition, agents also suffered from an increased level of crime, augmented by the lack of provider support.

- **Intensified migration:** According to the University of Nairobi Populations Studies and Research Institute, deteriorating security and terrorist attacks over the past two years have negatively affected the economic wellbeing and physical safety of Kenyans across the country, including along the Somalian border. As a result, there has been a migration from border counties to central areas and Nairobi, as well as emigration from Nairobi and vicinities to other countries including the U.K. and the U.S. With the majority of migrants being remittance senders, the migration patterns are affecting the choice of remittance channels, in particular, mobile money.
Customers are benefitting from the competition among telcos by getting access to better services at lower costs

- **New players in the market:** The Communications Authority of Kenya (CAK) licensed three new Mobile Virtual Network Operators (MVNOs) -- Mobile Pay, Finserve Africa and Zioncell Kenya -- to offer mobile money services to Kenyans.

- **New VAS:** Mobile money service provider Airtel Kenya, in partnership with the Kenya Revenue Authority, added a tax payments service that allows Kenyan citizens the opportunity to pay their taxes through mobile money.

- **Mobile money roaming:** Airtel Kenya launched cross-boarder mobile money transfers allowing Airtel customers to transfer money, top up airtime and use data seamlessly while traveling in Kenya, Rwanda, Uganda and Tanzania. Roaming customers can pay utility bills, buy goods and services, and withdraw cash at selected ATMs in any of these countries.

- **Reduced M-PESA tariffs:** Safaricom reduced the cost of P2P transfers via M-PESA by 67% for small- and medium-value transactions.
The line between formal banks and mobile money providers is blurring as Equity Bank leads the way to mobile money services offered through banks

- **Equity Bank’s strategy to delivering mobile money**: Equity Bank is getting ready to launch its mobile money platform, Equitel, in the first quarter of 2015, offering a competitive alternative to Safaricom in price, quality and value.
  - Equity Bank will have a head start because it already has a large customer base and a strong following among low- and middle-class Kenyans.
  - Registration of customers on the Equitel platform has been ongoing since summer 2014, ahead of the official launch.
- Customers with a free SIM card to gauge preliminary interest in its mobile money services, and prepare customers for the switch to the Thin SIM;
- Equity Bank has created a holding company (Equitel) that can support the Bank’s portfolio diversification, including the launch and promotion of the mobile money service;
- Equitel’s promise is to reduce the cost of transferring money through mobile phones by up to 50% of the current average market rate.
- Equity bank provided all of its
CONTEXT: THE DEMAND-SIDE CONSUMER
The Kenyan adult population is mostly under 35 and is in rural areas, and lives equally above and below the poverty line.

</table>

Only 9 percent of adults say the lack of an ID is the reason they don’t have a bank account and 4 percent say the same about a mobile money account. The majority of nonusers have other reasons for not signing up for either type of account.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
KENYANS’ MOBILE PHONE USE
There’s widespread access to mobile phones; most own their devices

Mobile phone ownership and access by demographic group
(Shown: Percentage of each demographic group who owns a mobile phone)

- **Total (N=2,995)**: 89% own a phone, 15% borrow a phone
- **Males (n=1,221)**: 89% own a phone, 12% borrow a phone
- **Females (n=1,774)**: 88% own a phone, 18% borrow a phone
- **Urban (n=1,094)**: 96% own a phone, 9% borrow a phone
- **Rural (n=1,901)**: 85% own a phone, 18% borrow a phone
- **Above the poverty line (n=1,493)**: 87% own a phone, 8% borrow a phone
- **Below the poverty line (n=1,502)**: 61% own a phone, 21% borrow a phone

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
Kenyan adults are avid mobile phone users, utilizing phones in a number of ways, including for financial transactions, browsing, and social media engagement.

### Mobile phone uses
(Shown: Percentage of Kenyan adults with access to mobile phones, n=2,649)
- **Any activity (based on whole sample size)**: 86%
- **Make calls**: 100%
- **Receive calls**: 99%
- **Send/receive SMS**: 81%
- **Make a financial transaction**: 73%
- **Took a color picture**: 34%
- **Use the internet**: 28%
- **Use on-demand provider services**: 26%
- **Use social networking sites**: 25%
- **Download music, video or games**: 25%
- **Send/receive MMS**: 21%
- **Download a mobile phone application**: 18%

### Types of mobile phone uses
(Shown: Percentage of Kenyan adults with access to mobile phones, n=2,649)
- **Make or receive calls ONLY**: 10%
- **Make/receive calls and SMS only**: 10%
- **At least one type of advanced activity**: 80%

- On average, mobile phone users perform four activities on a mobile phone.
- Fourteen percent can do 10 or more activities.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Most users do not need help using their phones, even when it comes to financial transactions, though more do need assistance with this.

**Mobile phone uses with and without assistance**
(Shown: Percentage of those who ever performed a specific activity)

- Use social networking sites: 97%, 3%
- Took a color picture: 95%, 5%
- Download mobile applications: 95%, 5%
- Receive calls: 94%, 6%
- Use on-demand provider services: 94%, 6%
- Use the internet: 94%, 6%
- Make calls: 93%, 7%
- Send/receive SMS: 92%, 8%
- Send/receive MMS: 92%, 8%
- Download music, video or games: 92%, 8%
- Make a financial transaction: 90%, 10%

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Even users who borrow a phone still engage in advanced activities, including financial transactions.

**Frequency of mobile phone use by mobile phone ownership**

- **Have a phone** (n=2,308):
  - At least once a day: 91%
  - At least once a week: 8%
  - Less frequent than once a week or never: 0.3%

- **Borrow a phone** (n=427):
  - At least once a day: 48%
  - At least once a week: 35%
  - Less frequent than once a week or never: 18%

**Types of mobile phone uses by mobile phone ownership**

(Shown: Percentage of Kenyan adults who ever performed a given activity)

- **Make calls**: 100%
- **Receive calls**: 100%
- **Send/receive SMS**: 86%
- **Make a financial transaction**: 78%
- **Take color pictures**: 38%
- **Use the internet**: 32%

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
KENYANS’ FINANCIAL BEHAVIORS
There’s extreme vulnerability due to strong remittance-reliance, including foreign remittances, and high living expenses along with low earnings

87% have debts that exceed their savings, at least occasionally

81% are unable to earn more than they spend each month at least occasionally

83% had no money left over last month after paying all expenses

50% do not have an emergency fund to cover unplanned expenses

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
It’s common to end the month with no remaining funds; spending less than the monthly earnings is unusual

Which of the following statements describes your financial situation last month? (Total population, N=2,995)

- I paid all typical family/personal expenses and had some money remaining: 17%
- I paid all typical family/personal expenses and had no money remaining: 62%
- I had to borrow money to pay some typical family/personal expenses: 15%
- I had to borrow money to pay all typical family/personal expenses: 6%

How often does the following apply to you: I spend less money than I make each month? (Total population, N=2,995)*

- Always or most of the time: 19%
- Sometimes: 22%
- Rarely: 37%
- Never: 23%

*Due to percentage rounding the total adds up to 101%

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
When there is money left over at the end of the month, Kenyans opt to save; it’s also common to send remittances.

After paying your and your family’s typical expenses, what was the largest expense for which you used leftover money last month?
(Shown: Percentage of adults who had leftover money “last month,” n=526)

- Saving money: 80%
- Sending money to other people, including sending regular support money, emergency support, gifts, etc.: 41%
- Entertainment: movies, restaurants, sport shows, theater plays, restaurants: 27%
- Investing: 23%
- Other (Specify): 15%
- Repaying loans: 12%
- Paying for insurance: 10%

The question allowed for multiple responses.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Remittances are a habitual part of Kenyans’ financial lives

**Remittance recipients, by demographics**
(Shown: Percentage of each demographic group who receives remittances)

- Women are 64% more likely to receive remittances than males. However, there is no difference in remittance-reliance among females by poverty status and urban-rural residence.
- Self-employed (36%) and farmers (51%) are the most likely of all employed adults to receive remittances.

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
It’s more common to receive than it is to send remittances; with some variation, all demographic groups are participating in remittance activities

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Three in 10 borrow money, mostly from other people, and largely for investments and education

**Where do you borrow from?**
(Shown: Percentage of adults who take loans, n=968)

- Other people, e.g., family, friends, neighbors, shopkeepers, money guards, etc.: 54%
- Microfinance institution: 29%
- Bank: 20%
- Mobile money: 14%
- SACCO: 11%
- Nonbank financial service providers such as chamas, cooperatives and VSLA: 10%
- Other: 2%

**How do you spend borrowed money?**
(Shown: Percentage of adults who take loans, n=968)

- Investment in business, farm or future: 33%
- Educational expenses, school fees: 24%
- Routine purchases (groceries and transportation): 22%
- Medical payments, hospital charges: 8%
- Pay bills: 6%
- Other (Specify): 4%
- Emergency expenses: 2%
- Large purchase (TV, car or house): 2%

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Borrowers mostly know the loan interest rates; rate awareness among those borrowing via mobile money services lags awareness of other product rates

Do you know what interest rate you pay on a loan from this institution?
(Shown: Percentage of adults who take loans from each type of lender)

Managing financial ups and downs, protection and saving “just in case” are the three core reasons for saving money

**Why do you save money?**
(Shown: Percentage of adults who save, n=2,036)

- Just make ends meet on a daily basis: 57%
- Protect my family from poverty and crime: 51%
- Save as much as I can: 50%
- Start/expand my own business: 45%
- Protect my belongings: 34%
- Build children’s fund for education: 34%
- Buy a farm or invest in my farm: 29%
- Build a health/medical emergency fund: 20%
- Education for myself: 18%
- Buy expensive and prestigious things: 15%
- Get ready for retirement: 12%
- Give back to my community: 7%
- Build children’s fund for wedding (the ceremony and/or dowry): 5%

*The question allowed for multiple responses. The percentages do not add up to 100%.

M-Shwari user demographics are changing to include more vulnerable populations: rural users of mobile money and those below the poverty line

M-Shwari user demographics
(Shown: Percentage of M-Shwari users who fall into each category, n=497)

Source: InterMedia Kenya FII Tracker surveys Wave 1 (N=3,000, 15+), September-October, 2013, and Wave 2 (N=2,995, 15+), September 2014.
The three factors that are most likely to predict the use of digital financial services among Kenyan adults include:

1. Demographics

2. Financial knowledge and behavior

3. Technical comfort

Technical comfort is defined as a combination of skills necessary to conduct activities on a mobile phone and confidence to conduct such activities independently (without other people’s assistance).

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Demographic characteristics and access to a mobile device impact the likelihood of being an active registered mobile money account user.

- Poverty status
- Urbanicity
- Age
- Level of education
- Employment status
- Access to a mobile device

An individual who resides in an urban area, lives above the poverty line, is older than 34, is employed and has access to a phone is highly likely to be an active mobile money account holder. When controlling for the mentioned demographic variables, gender does not predict active registered mobile money account use.
Higher levels of financial knowledge and responsible financial behavior predict registered mobile money use

Defined by indexed constructs:
- Financial plans
- Financial behaviors
- Financial numeracy

Aside from demographic characteristics, individuals who have formal financial plans such as retirement and emergency-preparedness plans, those who borrow money and repay it on time/before the deadline, and those who have good financial numeracy are highly likely to be active mobile money account holders.
The ability to send, receive and understand complex text messages is a strong predictor of active mobile money use.

- Technical literacy, particularly as it relates to the ability to comfortably use text-based mobile phone features, is positively correlated with active registered mobile money use.
- Reducing the difficulties of using mobile phones beyond simple calling might help advance mobile money use among existing consumers, and stimulate uptake and registration for the services.
USE OF BANKING SERVICES IN KENYA
Less than a third of adults use banks; formal banking appeals mostly to men, urbanites and those living above the poverty line

Demographic trends for access to and registered use of bank accounts
(Shown: Percentage of Kenyan adults who fall into each category, N=2,995)

Differences in waves are not significant at the 95% confidence level. Categories are not mutually exclusive.

- The most common bank account uses still mainly involve withdrawing and depositing.
- More than a third of active account holders receive their salaries via direct deposit to their bank accounts.

*Question allowed for multiple responses.*

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
A quarter of adult Kenyans can access a bank account via various digital means

Digital bank account access*  
(Total population, N=2,995)

- Digital bank account users, not registered
- Lapsed digital bank account holders
- Active digital bank account holders
- Do not have digital access to a bank account

Active digital account holders (20%) use a variety of methods

Method of access  
(Shown: Active digital bank account holders, n=636)

- Debit/ATM or credit card: 97%
- Can be accessed via internet or mobile: 76%
- Can't transfer money digitally: 68%

Digital bank accounts offer at least one of the following options: debit/ATM or credit cards, internet or mobile access, or a digital money transfer capability.

*Question allowed for multiple responses.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Digital access might be enabling or stimulating active use of bank accounts

89% of bank account holders can access their bank account digitally

77% of bank account holders are active users of a bank

96% of active bank account holders can access their bank accounts digitally

83% of bank account holders with digital access are active bank account users

Those with digital access tend to be more active in using their bank accounts compared with those who cannot access their bank accounts digitally.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
There’s a lack of a perceived need for bank accounts, and an insufficient understanding of services; many feel they lack the money to open an account.

SPECIAL TOPICS: MOBILE MONEY AGENTS
Agent-assisted transactions are very common among registered and unregistered mobile money users

Preferred way to use mobile money services
(Percentage of registered and unregistered users who chose each method)

- **Transact via their own account**: 63% (Registered MM users), 0% (Unregistered MM users)
- **Use OTC via an agent**: 54% (Registered MM users), 47% (Unregistered MM users)
- **Use MM account of a family member in this or another household**: 4% (Registered MM users), 50% (Unregistered MM users)
- **Other shared use**: 2% (Registered MM users), NA (Unregistered MM users)

The high reliance on agents might be explained by the dominance of basic activities on mobile money – including deposits and withdrawals – which can be done either through an agent or by using ATM or a bank branch. Access to ATM/banks in Kenya is lower than access to agents.

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
Only a third of mobile money users have a regular agent; the majority use any agent available when and where they need to make a transaction.

### Users who have regular mobile money (MM) agents

The lack of loyalty to mobile money agents might be explained by the high turnover rate among agents. According to the Agent Network Accelerator survey by MicroSave (ANA survey), only 58 percent of mobile money agents in Kenya said they would continue working as agents next year, significantly less than what was reported for Tanzania and Uganda.

*Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.*
More than half of Kenyan mobile money users have an agent nearby, even in rural and impoverished areas, confirming intense market competition.

According to the ANA study, Kenyan mobile money agents tend to set their agencies close to re-balancing facilities: places where agents can exchange e-float for cash and vice versa, typically bank branches. This geographic tethering, however, does not seem to affect the accessibility of agents, even in rural areas. The fact that most mobile money users can find an agent within 1 km radius from their homes confirms the intense competition in the market, which, according to agents, negatively affect the agency’s profitability.

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Nearly all users had problems transacting with an agent, mainly because of low liquidity or network downtime

The top five problems with mobile money agents
(Percentage of mobile money users, n=2,300)

- Agent did not have (enough) cash or e-float to perform a transaction: 55%
- GSM/mobile network was down: 52%
- Agent's system was down: 51%
- Agent was absent: 43%
- Agent did not give a receipt: 37%

How many times have you experienced this issue in the past 6 months?
(Percentage of mobile money users who reported each issue)

- Agent did not have (enough) cash or e-float to perform a transaction: 52% Less than 3 times, 48% 3 times or more
- GSM/mobile network was down: 47% Less than 3 times, 53% 3 times or more
- Agent's system was down: 51% Less than 3 times, 49% 3 times or more
- Agent was absent: 61% Less than 3 times, 39% 3 times or more
- Agent did not give a receipt: 14% Less than 3 times, 86% 3 times or more

Source: InterMedia Kenya FII Tracker survey (N=2,995, 15+), September 2014.
Most customers say they do not report agent-related issues; this makes it harder for providers to quickly resolve problems

Agent-issue-related behaviors
(Percentage of mobile money users, n=2,300)

- Experienced an agent-related issue: 87%
- Resolved the issue to their satisfaction: 57%
- Reported the issue to a provider: 7%

- Many mobile money users turn to agents for basic activities, including deposits, withdrawals, airtime top-ups and P2P transfers.
- The combination of agent accessibility/proximity and basic operations prevents customers from developing agent loyalty. The majority use any agent that is available when they need to make a transaction.
- Females, rural residents and those living below the poverty level require the most help from agents. They also tend to be at a disadvantage compared with males, urbanites and non-poor because they are less likely to have an agent nearby.
- While there are a lot of issues with agents, most of them are resolved to customers’ satisfaction.

SAMPLING APPROACH

Working with Kenya National Bureau of Statistics (KNBS)

• InterMedia worked with KNBS to agree to a sample size of 3,000 and draw a sample that was nationally representative of adults (15+ older). The achieved sample was 2,995 respondents.

Combining Two Sampling Frames (NASSEP IV and NASSEP V)

• InterMedia combined two purpose built sampling frames (NASSEP V and NASSEP IV) provided by KNBS to ensure full national representation.

• NASSEP V covers all districts except the northeast and was drawn from updated 2009 household census data released in 2013 by KNBS as part of their 5th National Sample Survey and Evaluation Programme.

• NASSEP IV covers the northeast and was drawn from updated 2009 census data. NASSEP IV provides the most current available population data for the northeast (NASSEP V was ongoing in the northeast when this survey went to field).

Sampling Enumeration Areas (EAs)

• The combined NASSEP frame sampled a total of 5,360 EAs from urban and rural strata within each county using the probability proportional to population size method (using numbers of households rather than people).

• Systematic random sampling was then used to distribute the total number of selected urban and rural EAs (5,360) equally into four subsamples (a total of 1,340 EAs in each) ensuring each had a uniform urban/rural composition.

• Selected EAs within each sub-sample were then further standardized into uniform size units ranging from between 50 and 149 households.

• Simple random sampling from within one of the 4 sub-frames was used to select the final 300 EAs (10 interviews in each) used in the study (as well as 7 subsequent replacements due to access, security and language barriers).

Sampling Start-_points, Households and Respondents

• One start point within each EA was chosen by randomly selecting from a list of local landmarks identified by village elders.

• Households (see definition in glossary) were selected using a random route walk, standardized skip pattern and process for substitution.

• One respondent per household was selected using the Kish grid method and relevant consent for eligible respondents under 18 years of age was obtained. Ten interviews were conducted per EA.
• Access to an account—An individual is said to have access to an account if he/she has used either mobile money or bank services, at least once, either via their own account or via an account of another person.

• Account holder—An individual who has a registered bank or mobile money digital account.

• Active account holder—An individual who has a registered digital account and has used it in the last 90 days.

• Agent—A person or business contracted by a DFS provider to provide services to customers using their own bank or mobile money account.

• Bank/banking services—All services offered by a bank through a branch, ATM, kiosk, business correspondent, or other delivery channel.

• Banked—An individual with a registered account at a formal financial institution. For this particular study, the banked are all individuals with their own bank accounts.

• Digital account—A financial account that can be accessed through digital means such as an ATM/debit card or via the internet or mobile phone.

• Digital financial services (DFS)—All bank and mobile money services.

• Financial inclusion—For the purposes of this study, those with a bank, nonbank financial institution or registered mobile money account that offer a range of financial services beyond credit are considered financially included.

• Grameen Progress out of Poverty Index (PPI)—A poverty measurement tool from the Grameen Foundation wherein a set of country-specific questions are used to compute the likelihood that a household is living below the poverty line.

• Household—For the purposes of this study, a household is defined as a group of people who fulfill any two of the following requirements: sleep under one roof, eat from one pot, or have one common decision-maker.

• Mobile money services—Mobile money services include 1) nonbank semi-closed mobile money accounts/wallets and 2) full-service mobile money bank accounts that allow for cash withdrawals. Semi-closed mobile wallets are not considered to be bank accounts, while full-service mobile money bank accounts are considered bank accounts.

• Poor/below poverty line—“Poor” adults, or those living below the poverty line, are defined as those living on less than $2.50 per day (at 2005 purchasing power parity), as classified by the Grameen Progress out of Poverty Index (PPI).

• SIM card—A removable micro-card that contains a subscriber identity module that securely stores the electronic codes used to verify subscribers’ identities on mobile phones and computers.

• Technical comfort—A combination of skills necessary to conduct activities on a mobile phone and confidence to conduct such activities independently, without other people’s assistance.

• Unbanked—Individuals without a registered bank account.

• Urban/rural—Urban and rural persons are defined according to their residence in urban or rural areas. The population in the survey was divided between towns and villages, which were classified as such based on the size of each of their populations. Towns are urban areas, villages are rural.
