## 1. Background Information

InterMedia conducted a nationally representative survey in India to explore the uptake and usage of digital financial services (DFS) among the adult population (ages 15 and over). This Financial Inclusion Insights (FII) survey is the fifth in a series of surveys InterMedia uses to track the role DFS play in money transfers, payments, and savings among various consumer segments. The survey will provide actionable insights for a range of stakeholders involved in the DFS sector.

The survey specifically aims to:

- Measure adoption and use of DFS among specific target groups (e.g., poor, rural and unbanked);
- Evaluate service performance among DFS agents and customers;
- Produce consumer insight to support product and service development and delivery;
- Identify drivers and barriers to further adoption of DFS, and;
- Collect data enabling forward projections and insight that will generate market growth.

## 2. Sample Design

## a. Sampling frame

The target sample size for the 2017 India FII survey was 45,000 adults aged 15 and over residing in households. The survey coverage excluded the state of Jammu \& Kashmir and the two union territories of Andaman \& Nicobar and Lakshadweep. The seven North-Eastern states were grouped together and treated as one cluster for sampling purposes. The sample was designed to produce reliable estimates for the main indicators for the country as a whole, and for urban and rural areas separately.

The sampling frame was the list of towns and villages in each state and was obtained from the 2011 census file. Each town and village is respectively divided into five town classes and three village classes according to their population size as follows:

- Town Class 1: More than 4 million population
- Town Class 2: 1 to 4 million population
- Town Class 3: 0.1 to 1 million population
- Town Class 4: 0.05 to 0.1 million population
- Town Class 5: Less than 0.05 million population
- Village Class 1: More than 3,000 population
- Village Class 2: Between 1,000 and 3,000 population
- Village Class 3: Less than 1,000 population

## b. Sample allocation and selection

The sample size was first allocated to the eight town and village classes proportionally to their population size. In each town and village class, the resulting sample size was then further allocated to states in proportion to their population.

The sample for the 2017 India FII survey was a stratified multistage sample, with a stratum corresponding to the urban town class or rural village class of a state. The sample was selected independently in each stratum. In the first stage, towns and villages were selected as primary sampling units with probability proportional to population size. In total, 174 towns and 870 villages were selected in the first stage of sampling. Prior to the selection of primary sampling units, villages with less than 50 households were removed from the sampling frame. This exclusion amounted to less than 2 percent of the population.

In urban town classes, wards were selected in the second stage of sampling using the systematic selection procedure. In each sampled ward, one polling station was randomly selected and the household opposite that polling station served as the starting point for the selection of 10 households using the random walk methodology.

In rural areas, households were selected in the second stage using the random walk methodology.
In both urban and rural areas, one adult household member was finally selected in each sampled household using the Kish grid and was administered the survey questionnaire.

Tables 1 and 2 show the distribution of the total sample size and number of sampled towns and villages.

## c. Sampling weights

The sample for the 2017 FII India survey is not self-weighting; therefore, sampling weights were calculated. Weights were based on 2016 population projection data by urban-rural residence, and gender. The weights were normalized at the national level so the weighted number of cases equals the total sample size. The normalized sampling weights were attached to the data file and used during analysis.

## 3. Questionnaire

The survey questionnaire was developed in consultation with the Financial Services for the Poor program at the Bill \& Melinda Gates Foundation. It draws on the questionnaire used in previous FII surveys. The modules and topics in each module are shown in Table 3.

Table 3. Questionnaire content by module

| Demographics | Mobile technology | Financial institutions/ banks | Mobile money | Nonbank financial institution | Financial literacy | Financial behaviors | Literacy | Gender |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  | Agent and provider experience | Savings and Ioan groups |  |  |  |  |
|  |  |  | Products |  |  |  |  |  |

The questionnaire was translated into 10 local languages (Hindi, Telugu, Tamil, Oriya, Malayalam, Mahrati, Kannada, Gujarati, Bengali and Assamese), and then pretested in Delhi, Mumbai, Bangalore, Kolkata, Hyderabad, and Ahmedabad. After the questionnaire was pretested, debriefing sessions were held with the pretest field staff and the questionnaire was modified based on the observations from the pretest. The finalized questionnaire was used to develop a script for data collection on tablets. The script was thoroughly tested and validated before it was used in the field.

## 4. Recruitment and Field Staff Training

Recruitment of the field staff was based on education level (at least a standard $10^{\text {th }}$ level), experience with surveys and language skills. For purposes of ensuring gender balance and sensitivity, both male and female interviewers were recruited.

Training was conducted in two stages. A centralized training of 16 team leaders was conducted in New Delhi on 2-4 August 2017. This was followed by four zonal training sessions of interviewer teams conducted by the 16 trained team leaders. Each zonal training session lasted five days and was held between 7 August and 12 August 2017.

Training had two main components: classroom sessions and field practice (also called pilot). The classroom sessions followed the training manual developed by InterMedia. These sessions covered the survey objectives, sampling methodology, fieldwork procedures, data quality control, guidelines on questionnaire administration and a detailed study of the questionnaire. Following the review of the questionnaire on paper, the training covered the use of tablets for data collection including the general operation of the devices, and the administration of the scripted questionnaire. Classroom sessions also included role-play where one interviewer acted as a respondent and another asked questions while the rest of the teams observed. The teams also conducted mock interviews in small groups.

## 5. Fieldwork

Fieldwork was launched immediately at the end of training and ran from 16 August to 10 November 2017. Data collection was carried out by 330 interviewers and 76 supervisors.

The following five consent forms were obtained during fieldwork:

- Consent form for the first contact person in the household;
- Consent form for the respondent selected in the household for the interview;
- Parent/guardian consent form for all selected respondents between the ages of 15 and 17;
- Consent form allowing the use of photography for all selected respondents; and
- Informed consent form for the selected respondent to participate in a separate follow-up study.

## 6. Substitution

During fieldwork, 40 originally sampled towns/villages were replaced for the following reasons: hostility of the community; lack of security; lack of permission from local authorities; and refusal to participate in the survey.

Selected households were generally responsive and willing to participate in the survey. However, a few households were replaced after three call backs.

## 7. Data Quality Control Measures

A range of quality control measures was employed before, during and after data collection.

## a. Pre-field quality control

Before fieldwork started, emphasis was put on recruiting and training the best interviewers and supervisors, and on designing the relevant and right survey tools (interviewer and supervisor manual, and field control forms). In addition to field supervisors, InterMedia recruited an independent local quality control (QC) team who reported directly to InterMedia. This QC team attended the same training offered to interviewers and supervisors, and traveled across the country to conduct frequent and unannounced random checks of field interviewers and supervisors. This team also played the same roles as field supervisors, and, therefore, provided an additional layer of fieldwork monitoring.

## b. In-field quality control

The fieldwork quality control procedures included the following activities:

- Direct observation: Thirty-three percent of all interviews were directly observed by supervisors or the QC team in full or, at least, partially. The purpose of observation was to evaluate and improve interviewer performance and to look for errors and misconceptions that could not be detected through reviews of completed interviews.
- Spot-checks: Nineteen percent of all interviews were subject to an in-person random spotcheck by a supervisor or a QC team member; another 22 percent were subject to a telephone check.
- Call-backs (return visits): High nonresponse rates bias survey results. To minimize nonresponse rates at both household and individual levels, the field procedure included three return visits to maximize the participation of selected eligible respondents. Therefore, a total number of four visits were planned for each selected respondent.
- Field control forms: Interviewers' work was monitored and evaluated by keeping an accurate record of assignments and the status of interviews. Both interviewers and supervisors had field control forms to maintain.
- Regular interim data review: With the use of digital data collection, InterMedia frequently received and reviewed interim data from the field. As a result, the quality of the data being collected was closely monitored and InterMedia provided real-time feedback to the field teams while they were still on the ground. These regular reviews helped minimize data errors and thus improved data quality.

## 8. Data Processing

Daily data monitoring was done to check the quality of the data, and to confirm receipt of completed interviews on the cloud servers, and field updates from the supervisors. The data was checked for accuracy and outliers. Inconsistencies found in the data were communicated to the field teams and resolved through call-backs with respondents. Interim datasets were regularly received from the field for review. The structure of the dataset was aligned with the codebook prepared by InterMedia. A cleaned, fully labelled final SPSS dataset was produced.

## INTRODUCTION

Good morning/afternoon/evening. Good morning/afternoon/evening. My name is $\qquad$ ..and I work for an independent market research company called Market Xcel based in India. Today, we are conducting research about how you use financial services that includes Banks, Mobile money, and non-bank financial institutions. This information will help policy makers and financial service providers to improve on the products and services they offer. Your household has been randomly selected to participate in the study, among a total of 45,000 households all over India. I have a questionnaire that will take about 60 minutes to complete, and targets those above 15 years of age. Anyone above this age may be randomly chosen to participate in the interview. It is my hope that an adult member of your household will agree to share their views with me. There are no right or wrong answers, and our discussion will be treated confidentially; we are not affiliated with the government in any manner. May I have your permission to interview one of the adult members of your household?

Definition of household (INTERVIEWER, IF TWO OF THE THREE CHARACTERISTICS ARE TRUE CONSIDER IT A HOUSEHOLD): All those who (1) share the same food pot, (2) share the same roof or
(3) have a common decision maker

Definition of adult: All those aged 15 and above

## 26. CLOSING

## INTERVIEWER: ADMINISTER THE INFORMED CONSENT FORM BELOW TO ALL RESPONDENTS WHO OWN A MOBILE PHONE (MT2=1) ELSE GO TO PHOTOGRAPHY CONSENT FORM ASK THE RESPONDENT TO SIGN THE PHOTOGRAPHY CONSENT FORM IF THEY HAVE NOT ALREADY DONE SO.

## Informed Consent Form to Participate in a Separate Follow-up Study

InterMedia Africa and MARKET XCEL would like to invite you to participate in a follow-up study which explores the use of digital financial services (DFS) in Kenya to introduce service improvements. For this study, we will track and analyze mobile money account transactions and voice and airtime use associated with your personal SIM card.

InterMedia and MARKET XCEL will not disclose any personal information gathered through this study without first asking for your permission. Everything we learn from you will be treated with the strictest confidence. To protect your privacy, we will remove all personal identifying information, as well as information for senders and recipients of mobile money, or recipients of voice calls and text messages from the survey. In case of any breach of confidentiality, you will be informed immediately.

Your participation in this follow-up study is entirely voluntary and you can stop participating at any point even if you agree to the study and then change your mind. But your participation will directly contribute to the work on enhancing financial services (for example, services offered by banks or mobile money providers) so that households like yours can take advantage of the improvements.

Before you decide to accept this invitation to take part in this study, you may ask the interviewer any questions about the study. If you are not satisfied with the answers, feel free to contact the Project Manager in Kenya: Name and telephone number

| Before you sign this form, please ask any questions on any aspect of <br> this study that is unclear to you. You may take as much time as <br> necessary to think it over. | Thank \& Close |
